RUNNING APPLICATION

The screenshot shows the Spyder Python IDE interface. The left pane displays the code for a Flask application named 'app.py'. The code defines a Flask app, sets a route for the root path to render 'Chatbot.html', and runs the app. The right pane shows the console output, which includes the usage instructions for the IDE and the Flask application's startup logs. The logs indicate that the app is running on http://127.0.0.1:5000/ and is receiving requests from the browser.

```

1 from flask import Flask, render_template
2
3 app = Flask(__name__)
4
5
6 @app.route("/")
7 def bot():
8     return render_template('Chatbot.html')
9
10
11 if __name__ == '__main__':
12     app.run()
13

```

Console I/O:

```

* Serving Flask app "app" (lazy loading)
* Environment: production
  Use a production WSGI server instead.
* Debug mode: off
* Running on http://127.0.0.1:5000/ (Press CTRL+C to quit)
127.0.0.1 - - [11/Nov/2022 19:48:22] "GET / HTTP/1.1" 200 -
